2D CNC Wire Bending Machine

Product Description

Wire bending machine is used for hangers to bend S-type Product Description

2D forming machine is a plane 2D wire bending forming machine. The forming process of wire shapes with different specifications can be realized through various transformations of molds. There are servo feeding + hydraulic cut-off combination, servo feeding + servo cut-off and full servo combination, which can be selected according to the size of actual products to achieve the highest cost performance. According to the needs of products, chamfering, arc punching, punching and other functions can also be added to achieve wider application and use.

This machine can be used in all walks of life. As long as the wire flat iron forming bending, can be convenient and fast with the machine production.
